

North Hardin Water Supply Corporation

Annual Drinking Water Quality Report

PWS: 1000015

Consumer Confidence Report

2018

Annual Water Quality Report for the period of
January 1, 2018 to December 31, 2018

TX1000015

Public Participation Opportunities

Date: Second Tuesday of Each Month

Time: 6:30 P.M.

Location: 5094 FM 92 North Silsbee, TX

Phone Number: (409) 385-7355

This report is intended to provide you with important information about your drinking water and the efforts made by North Hardin Water Supply Corp. to provide you with safe drinking water .

We strive to be efficient and maintain a level of service that our members deserve.

For more information regarding this report contact:
Bobby Rogers
409-385-7355

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono (409) 385-7355.

Information about Source Water

The TCEQ completed an assessment of your source water, and results indicate that some of your sources are susceptible to certain contaminants. The sampling requirements for your water system are based on this susceptibility and previous sample data. Any detections of these contaminants may be found in this Consumer Confidence Report. For more information on source water assessments and protection efforts at our system, contact Bobby Rogers at 409-385-7355.

Further details about sources and source-water assessments are available in Drinking Water Watch at the following URL: <http://dww2.tceq.texas.gov/DWW/>.

You may be more vulnerable than the general population to certain microbial contaminants, such as **Cryptosporidium**, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by **Cryptosporidium** are available from the Safe Drinking Water Hotline at (800)-426-4791.

WHERE WE GET OUR DRINKING WATER

The source of drinking water used by North Hardin WSC is Ground Water taken from the Evangeline Aquifer.

SOURCE WATER NAME:

3-WELL PLANT 3 N/HWY 92
7829 POST PLANT RD SILS BEE TX
TYPE OF WATER= GW (ground water)
REPORT STATUS - ACTIVE DAILY USE
LOCATION - EVANGELINE AQUIFER

SOURCE WATER NAME:

4-WELL PLANT 4/REED RANCH RD
8470 REED RANCH RD
TYPE OF WATER=GW (ground water)
REPORT STATUS - ACTIVE DAILY USE
LOCATION - EVANGELINE AQUIFER

SOURCE WATER NAME:

5-WELL PLANT 5/BISCAMP RD
7070 BISCAMP RD
TYPE OF WATER=GW (ground water)
REPORT STATUS - ACTIVE DAILY USE
LOCATION - EVANGELINE AQUIFER

For more information about your sources of water, please refer to the Source Water Assessment Viewer available at the following URL: <http://www.tceq.texas.gov/gis/swaview>.

Information About Your Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. North Hardin Water Supply is responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- **Radioactive contaminants**, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

2018 Water Quality Results

Inorganic Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Arsenic	2018	3	3.1-3.1	0	10	ppb	N	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Barium	2018	0.303	0.303-0.303	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Fluoride	2018	0.1	0.11-0.11	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories.
Volatile organic contaminants	Collection date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contaminants
Ethylbenzene	2018	2.2	0-2.2	700	700	ppb	N	Discharge from petroleum refineries
Xylenes	2018	0.019	0-0.019	10	10	ppm	N	Discharge from petroleum factories; Discharge from chemical factories

Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Individual Samples	MCLG	MCL	Units	Violation	Likely Source of Contamination
Combined Radium 226/228	2018	2	1.77-1.77	0	5	pCi/L	N	Erosion of natural deposits.
Gross alpha excluding radon and uranium	2018	7.5	7.5-7.5	0	15	pCi/L	N	Erosion of natural deposits.

Disinfectant	Year	Average Level	Min Level	Max Level	MRDL	MRDLG	Unit of Measure	Violation	Likely source of contamination
CL2	2018	1.28	.51	1.95	4	4	ppm	N	Water additive used to control microbes

The North Hardin WSC Drought Contingency Plan

This plan is a requirement of the State Regulatory Guidelines. The NHWSC plan includes:

- Stage 1—Mild Water Conditions,
- Stage 2—Moderate to Severe Water Conditions,
- Stage 3—Critical Water Conditions
- Stage 4—Emergency Water Shortage Conditions

This plan details the pumping levels that trigger the different stages. We utilize pumping records, well production, and guides such as the Palmer Drought Index in determining the need for activation of our drought plan. As of this date, we have not had to implement the drought contingency plan at any stage. If it becomes necessary to implement our Drought Contingency Plan, there will be notification through the local newspaper, and/or inserts in the water bills, and in extreme emergencies, notification may also be made by direct mail to each customer. A complete copy of the Drought Contingency Plan may be obtained by visiting our office. We will be happy to answer any questions regarding this plan.

Being Prepared

With the approach of Hurricane season, and as we turn our thoughts to storm preparations, remember that in the event of an evacuation, a good option is to cut off the water service at the customer isolation valve located on the **customer side** of the meter. This will help stop water loss and stabilize water pressure. This procedure can apply to vacations or extended time away from your residence as well.

Using Water Wisely

Even though we have a solid supply of groundwater, we recognize the importance of protecting this valuable life sustaining source. We would like to encourage everyone to practice good water conservation management actions by utilizing their water wisely, and by assisting the NHWSC by reporting leaks, broken lines or leaking valves. This will enable us to continue to serve our customers with good quality water.
